## Statement on PFAS content in our products

Per- and polyfluoroalkyl substances (PFAS) are a class of fluorinated organic substances used in a wide range of industrial applications. This class of substances is under regulatory scrutiny around the world.

To comply with existing and emerging regulatory requirements we are working with our suppliers to evaluate the potential impact on our product portfolio.

Based on the information we received from our suppliers, some of our products contain PFAS such as FPM/ FKM in sealings/O-rings and PTFE. PFAS that has been designated as SVHC is already covered under our REACH reporting.

For any further information or PFAS statements on article level please do not hesitate to contact [productcompliance@conec.de](mailto:productcompliance@conec.de).
